

# News Release

FOR IMMEDIATE RELEASE:

## **MISCO and Elite Gaming Technology deliver advanced sound quality for gaming.**

MISCO, a leading US-based audio systems manufacturer and Elite Gaming Technology (EGT) have joined forces to create the EGT Sound Beam™ — an integrated sound module designed to deliver higher quality sound for gaming.

The EGT Sound Beam packs a 2.1 (left, right, subwoofer) stereo sound system into a single structural component that's only 20.3"L x 2.3"H x 4"D. The compact size is intended to allow more room in the game cabinet for the bigger CPUs and display processors required by today's sophisticated casino games.

### **Complete, compact package**

MISCO president Dan Digre says that the Sound Beam system includes a custom driver array of six speakers, delivering

the equivalent of a 5.25" subwoofer in a 2-inch space, driven by a high-efficiency Class D amplifier. Dan explains, "Your players will hear the wide range of game sounds, both music and effects more evenly, which will enhance their total gaming experience. Game developers can leverage the high fidelity performance of the EGT Sound Beam to deliver more sophisticated soundtracks in their games."

The EGT Sound Beam provides a frequency range of 60 Hz to 20 kHz. The speakers, engineered and built by MISCO, feature a diaphragm of composite carbon fiber laminate, rubber surround, a neodymium magnet motor, enclosed mid-drivers which eliminate modulation, and extra-wide vertical dispersion with a low cabinet-edge diffraction. The high-efficiency MISCO amplifier electronics include an automatic crossover for the subwoofer, automatic bass management, programmable EQ for tonal balance; plus programmable high frequency shelf and adjustable low frequency controls.

Elite Gaming Technology is a leading designer/manufacturer of premium slot cabinets and advanced gaming components for Class II, Class III, VLT and other regulated game manufacturers worldwide. The management team is comprised of experienced gaming professionals and a design team that includes mechanical, electrical, and systems engineers. Elite offers cost reduction engineering, photo-realistic renderings, prototype development, and full scale production. Visit [elitegamingtech.com](http://elitegamingtech.com) to learn more.

MISCO has designed and manufactured loudspeakers and complete audio systems for more than 65 years. In addition to gaming, MISCO serves a wide range of industries including aerospace, medical technology, commercial and pro sound, performance venues, and home theater. MISCO manufactures in both the US and in Asia and provides enhanced value through strict adherence to technical specs and quality standards, clear customer communications, responsive support, and hassle-free logistics.
